Jason Blood

Senior Software Developer

Scottsdale, AZ Atomic Comics FUSIS LinkedIn Clifford Algebra

Calm, trustworthy software, designed with the user in mind.

SUMMARY

With over two decades in the software development industry since 1999, I specialize in software architecture with a keen focus on mobile applications. My extensive experience includes working with startup companies and building Minimum Viable Products (MVPs), enabling rapid and innovative development. I am eager to leverage my expertise in software architecture to drive success and innovation within a forward-thinking organization.

EXPERIENCE

Founder · Legioneer 2026 — Now

I really just got tired of all the spam and bots and useless tripe on LinkedIn, ngl.

Founder · Atomic Comics 2025 — Now

A marketplace for independent comic creators to build their brand, their community, and connect with the world.

CTO · Photon Medical Communications 2013 — 2026

As the CTO, I have successfully managed a team of up to 8 professionals. I designed, architected, and built our primary product, including its backend services and data model, ensuring robust and scalable solutions that drive our business forward.

Software Architecture Lead · United Health Group 2010 — 2013

As a Senior Software Architect at United Health Group, I designed the Wellfi application, which rewarded customers with insurance discounts for maintaining a healthy lifestyle. Additionally, I developed a configurable system for calculating insurance rates, enhancing the flexibility and efficiency of insurance offerings.

Software Developer Consultant · Accenture 2006 — 2010

I collaborated with several prominent clients, including Best Buy, American Express, and General Mills. My work spanned web and mobile development, backend architecture, data APIs, and software mergers, delivering tailored solutions to meet each client's unique needs.

EDUCATION

BS, Physics · University of Minnesota - Twin Cities 1991 — 1995

Worked on the CMS project at CERN, studied theoretical physics with an emphasis on extensions of the Standard Model.
